📍 Surgut, Russia

🚀 Schlumberger

After my graduation, I accepted a job offer from Schlumberger, in the department for well-integrity cementing. I was located in Nefteyugansk (West-Siberia) where Schlumberger perform service for one of the biggest oil companies, Rosneft. Initially I started to follow a fixed-step training program which lasts three years. I was supposed to work first as trainee, then as an independent engineer and by the end of the third year I had to defend my own project. As for today, I am working as a chief-engineer and successfully completed Well Services - Basic Operations, Cementing Execution and Technical schools which took place in Schlumberger Middle East Learning Center, Abu-Dhabi (UAE).

POMOR Master program gave me a crucial and essential international experience in different geoscientific subjects which I have been applying during all my career in Schlumberger since I was hired there. Furthermore, knowledge gained during my POMOR study in collaboration of Saint Petersburg State University and Bremen University gives me advantage in my work every day.
